

# Installation Management Services

IT professionals now have a quick and easy way to install applications on multiple MetaFrame™ and WinFrame® servers. Citrix Installation Management Services is a product designed specifically for Citrix MetaFrame and WinFrame environments.

## Eliminate manual installations.

With large-scale Citrix server environments, installing applications across multiple servers can be a challenge. Citrix Installation Management Services overcomes this challenge by automating the application installation process so applications can be quickly and easily replicated to Citrix servers across the enterprise. Applications are now distributed in minutes rather than days or weeks.

**Citrix Installation Management Services uses a simple “Package and Publish” process to distribute applications across the enterprise.**

## Save time and money.

Citrix Installation Management Services will save time and money for organizations with:

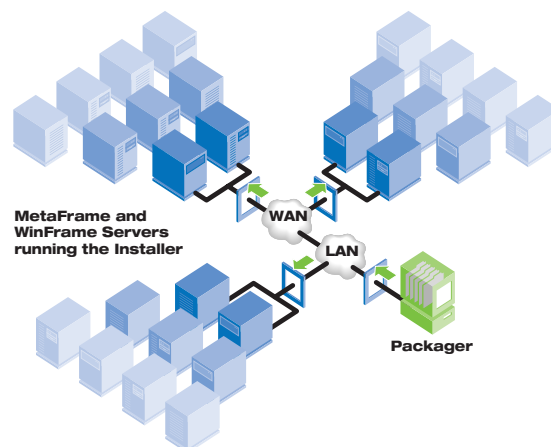

- Multiple MetaFrame and/or WinFrame servers
- Numerous and/or frequently updated applications
- Citrix servers in dispersed locations

## “Package and Publish.”

Citrix Installation Management Services includes two components — the “Packager” and the “Installer.” With the Installer deployed to all Citrix servers in the enterprise, the Packager makes replicating applications a simple two-step “Package and Publish” process.

## Package the application.

The Packager includes an easy-to-use Wizard that guides the administrator through the packaging process, including the installation and configuration of the application. The result is a “package” that contains all application files and a “script” that depicts the application setup process.

#### **Publish the application.**

To “push” an application to Citrix servers equipped with the Installer,

from a given Citrix server.

Thus, IT administrators can now relocate applications from

## **Citrix Installation Management Services allows administrators to deploy applications to multiple Citrix servers in minutes rather than days or weeks.**

simply publish the script to those servers. The application will then be seamlessly distributed and automatically installed onto Citrix servers across the enterprise.

one server to another with the click of a mouse.

#### **Works with Load Balancing.**

Citrix Installation Management Services is the perfect complement to Citrix Load Balancing Services, making it easier than ever to support hundreds to thousands of concurrent users. Combined with Program Neighborhood™, a feature of MetaFrame and WinFrame, Citrix offers a complete, end-to-end application deployment solution for the entire enterprise.

#### **Seamless operation.**

The Packager runs on its own PC. The Installer runs as a background service on each Citrix server and is completely transparent to the user. Thus, no additional user training is required.

Citrix Installation Management Services is available from authorized members of the Citrix Solutions Network worldwide. For more information on this and other Citrix products, please connect to the Citrix website at [www.citrix.com/products](http://www.citrix.com/products).

#### **Uninstalling applications is simple.**

With Installation Management Services, the Installer intelligently keeps records of every application component installed. So to uninstall an application, the administrator merely “unpublishes” that application
