

Citrix® MetaFrame XPs™ for Windows *with Feature Release 1.*

The rapid application serving system designed for departmental workgroups to extend the reach of Windows 2000 Server to any device, via any connection—wired, wireless or Web.

Citrix MetaFrame XPs customer profile.

The following is a list of criteria typical of our customers.

- **Key needs:**
Support for diverse client types and devices; low bandwidth connectivity
- **Usage level:**
Single application deployment
- **Number of servers:**
1 to 5
- **Server cluster:**
Individual servers
- **Server size:**
Single processor
- **Users per server:**
20 to 30
- **Server deployment:**
Department or workgroup
- **System configuration:**
Central or replicated sites
- **Microsoft operating systems:**
Windows 2000 Server or advanced platforms

To successfully compete in today's demanding business environment, organizations of all sizes must function at peak productivity. That's why Citrix, a world leader in application serving, created Citrix® MetaFrame XP™s for Windows®. This robust application serving platform enables departments, workgroups, branch offices and small businesses to maximize application availability so users have access to the business-critical information they need anytime, from any device, over any connection—wired, wireless or Web. Citrix MetaFrame XPs enables organizations to deliver a predictable computing experience with outstanding performance from applications running on a central server. It is this application serving platform that allows organizations to leverage the Net as a primary computing infrastructure and streamline support and administration activities by centralizing IT management and control. Citrix MetaFrame XPs cost-effectively extends the virtual workplace by expanding the reach of Windows servers to users anytime, anywhere—using reliable, secure and highly scalable industry-standard technology.

Centralize management and simplify deployments.

IT professionals face the ongoing challenge of quickly, reliably and cost-effectively deploying applications and updates. By consolidating the control of applications, licenses and resources within the Citrix Management Console (CMC), Citrix MetaFrame XPs provides a single-point command center that tames complex IT tasks. Now administrators can:

- Quickly, easily and cost-effectively deliver applications and content to any user through application publishing and content publishing capabilities.
- Maintain total administrative control of applications by pushing Windows icons down to the desktop or to the Start menu via Citrix Program Neighborhood™.
- Easily accommodate diverse printing environments by consolidating print driver requirements into a single universal print driver. This reduces printing bandwidth requirements while enhancing the end user's experience.
- Remotely troubleshoot application problems by taking control of the end user's client session. Using the advanced shadowing function, users can receive an on-screen shadowing indicator and administrators can record and document shadowing instances.
- Publish applications to Microsoft® Active Directory™ and Novell® NDS® users, share and manage information about network resources and users, and consolidate management tasks.

Leverage the universal Net and provide universal access.

Citrix MetaFrame XPs brings to life the concept of a universal Net—the seamless integration of LANs, WANs, the Internet, Intranets and Extranets into a unified computing infrastructure—with Citrix NFuse™ application portal software. By integrating Citrix NFuse into Citrix MetaFrame XPs, organizations can benefit from the aggregation of existing and custom applications and content into a single portal view. This allows the same user experience for the entire organization through any device in any location. Using Citrix MetaFrame XPs, administrators can:

- Publish applications and content into any standard Web browser without rewriting a single line of application code.
- Personalize the applications and content a user receives.
- Optimize network performance and security with application filtering and caching, ticketing and SSL encryption.
- Simplify access, improve productivity and deliver true user mobility by giving users application access from any device that supports a standard Web browser.

Any device. Any connection. Unlimited access.

Organizations depend on a wide variety of computing devices that use a variety of connections. With Citrix MetaFrame XPs, organizations can rapidly deploy the latest business-critical applications to any device, over any connection without ever touching an individual desktop. And most important, all applications look, feel and perform as if they are running on a local desktop. Using Citrix MetaFrame XPs, IT administrators can:

- Extend the reach of Windows-based applications to any location in the enterprise.
- Deliver true flexibility with seamless application access from Windows PCs, Macintosh® computers, UNIX® and Linux® workstations, laptops, thin-client devices such as Windows-based terminals, wireless devices and other network appliances.
- Support uniform application appearance and performance over any network connection—Internet, LAN, WAN, dial-up and wireless.
- Deliver a seamless user experience by configuring the Citrix Independent Computing Architecture (ICA®) client to automatically attempt a reconnection to a user's disconnected, yet still-active session with Auto Client Reconnect.
- Provide added security and peace of mind with SSL encryption which allows Citrix ICA and XML content to pass through the firewall via the HTTPS port without additional firewall configuration work.

Citrix puts the power of true enterprise-class application serving to work across your entire organization. For more information, contact any authorized member of the Citrix Solutions Network™ worldwide, or visit www.citrix.com

About Citrix

- Founded in 1989, Citrix Systems, Inc. (Nasdaq: CTXS) is a global leader in application serving software and services—offering the ability to deliver any application to any device over any connection—wired, wireless or Web.
- Citrix solutions enable organizations of all types and sizes—from medium-size businesses to major enterprises—to reach more users, with more applications, in more locations. Citrix extends application reach with greater speed, improved predictability and lower costs.
